OUR POLICY

INDEXED.

We have specialized in growing vigorous, healthy trees for the planet, they are grown on the Glendale looses. It has been our study and life work of propagating the best trees adapted to our climate, which has done so much to make our business a success. The true nurseryman must be an experienced grower, a knowledge of orchard methods, varieties and markets is as necessary to good nursery work as the left hand is to the right.

Some claim to be nurserymen who know nothing about the growing—they are not nurserymen, they are dealers; they understand little about the young trees before they sell them, and care less after they leave their hands.

We grow our own trees **from the roots up**, we sow the finest of seed, and bud the seedlings from bearing trees, everything is kept true to name from the time the buds are put in, until they leave our packing shed, hence we know what we are giving our customers.

Our business is to grow the best trees that can be propagated and sell them direct to you from our nurseries at the lowest possible price. Our business is to give you accurate, careful information, so that you may select the best varieties of trees for your own special requirements, you want the healthiest, hardiest and most vigorous trees and plants at reasonable cost. We have and will deliver just what you want and the way you want it. **Lets Trade.**

DIRECTIONS TO CUSTOMERS.

(1.) It pays to order early and have your trees delivered as soon as the weather conditions will permit. We assure safe arrival.

(2.) We recommend early planting, from January 1st, to March 15th, is the best time.

(3.) After receiving trees, cover the roots over with moist soil at once, until ready to plant.

(4.) Before planting, prune off all broken and long roots, peach, plum, apricot, etc., should be pruned back to about 18 inches from ground

Correspondence Invited

GLENDALE NURSERY CO.

(5.) Dig holes large enough to allow all roots without cramping. Fill holes half full with soil, put in a pail full of water to settle dirt around the roots, then fill up with top soil. The cause of trees failing to start in many instances is due to failure to settle the soil around the roots. Do not tramp the soil, let the water settle the soil.

(6.) Every precaution is taken to have each tree and plant true to label. If from any fault of ours a tree is not true to label, we will on proper proof, replace the number.

We warrant all trees and plants to be good, strong and healthy, but having no control over planting or care after delivery to the buyer, we will not be responsible in any way than stated.

(7.) In cases where patrons are not acquainted with varieties the selection may be left to us. When ordering please state whether substitution will be allowed, should we be out of any varieties or sizes called for. In the absence of instructions we usually feel at liberty to fill orders with other similar and if possible better varieties which we may have on hand at the time.

(8.) Caution: Be careful in unpacking to note everything and either plant or cover up with moist soil at once.

Get your order in early for delivery at the proper season.

NOT LISTED.

Trees or plants not on this list can be had at market prices
50 trees at the 100 rate; 500 trees at the 1000 rate.

GLENDALE ROSES.

Our roses are large field grown plants, buy direct and have them fresh from the ground.

Our roses are grown on their own roots and are better for the family garden than budded roses, they never sucker and produce wild roses, they have been blooming profusely this season.

Rose Classification.

T.—Tea: Of free blooming habit; delicate tea fragrance.

H. P.—Hybrid Perpetual: Of strong upright growth, flowers large and fragrant, very hardy.

H. T.—Hybrid Tea: A hardy everblooming rose, sweetscented

C.—Climbing roses.

P.—Polyantha or Rambler.
